DEVILS LAKE, N.D. — Summers Manufacturing, a leader in innovative agricultural equipment, today announced the launch of its new Strip Till equipment line featuring two distinct models: the Verdant and the Apex. These high-performance units are designed to provide farmers with versatile solutions for precision strip tillage and fertilizer application.

"Our new Strip Till equipment line represents Summers Manufacturing's commitment to developing tools that help farmers maximize efficiency and yields while promoting sustainable farming practices," said Matthew Volkmar, Director of Sales and Marketing for Summers Manufacturing. "The Verdant and Apex models combine superior engineering with practical design to deliver reliable performance in a variety of field conditions."

Advanced Features Across Both Models

The new Strip Till equipment line offers farmers a robust set of standard features designed for precision, durability, and ease of use:

- High-capacity hydraulic systems requiring minimum 50 gallon per minute at 3,000 psi
- Powerful row units with coulter unit requirement of 15hp per row and shank unit requirement of 25hp per row
- Comprehensive 1-year parts and labor warranty
- Individual scales per bin section for accurate application monitoring
- Large 3-inch fertilizer delivery lines for efficient nutrient placement
- ISO Raven RCM rate controller and section control standard on all dry fertilizer units
- Factory-installed and calibrated ISO rate controllers
- Tank features include:
 - Large openings for quick and easy filling
 - Adaptable bolt-together structure
 - Easy-to-clean design
 - 10-gauge 304 stainless steel construction
 - Stainless steel filter grating system

Verdant: Versatile Performance for Small to Mid-Size Operations

The Verdant model offers flexibility for farmers with small to medium operations:

- Available in 15' or 30' toolbar configurations
- Two dry fertilizer options capable of applying up to 900 lbs @ 5mph at 60" of water column pressure:
 - 12-ton 2-bin system with 50/50 split
 - 14-ton 2-bin system with 50/50 split
- Liquid fertilizer is an option
- Customizable options include:
 - GPS Globe Bracket
 - Tillage Coulter Assembly
 - Multiple row configurations (6, 8, or 12 rows)
 - Various row spacing options (20", 22", or 30")
 - Rear hitch for anhydrous toolbar
 - Option to deduct Raven RCM Rate Controller

Apex: Premium Performance for Custom Applicators and Large-Scale Operations

The Apex model delivers maximum capacity and versatility for larger farming operations:

- Available in 30', 40', or 60' toolbar configurations
- Five dry fertilizer options capable of applying up to 1,200 lbs @ 5mph at 60" of water column pressure:
 - 14-ton 2-bin system with 60/40 split
 - 14-ton 3-bin system with 40/20/40 split
 - 17-ton 2-bin system with 60/40 split
 - 17-ton 3-bin system with 40/20/40 split
- Liquid Fertilizer is an option
- Standard equipment includes auto grease system, hydraulic jack, and electric tarp
- Additional options include:
 - GPS Globe Bracket
 - Tillage Coulter Assembly
 - Extensive row configurations (12, 16, 24, 32, or 36 rows)
 - Multiple row spacing options (20", 22", or 30")
 - Rear hitch for anhydrous toolbar
 - Option to deduct Raven RCM Rate Controller

"Strip tillage continues to gain popularity as farmers seek to break traditional barriers. Strip till allows precision placement of nutrients where crops need them most," added Matthew Volkmar, Director of Sales and Marketing at Summers Manufacturing. "Our new Verdant and Apex models give farmers the tools they need to implement this practice effectively and efficiently, regardless of their operation size."

The new Summers Manufacturing Strip Till equipment will be available through authorized Strip Till dealers beginning in May 2025. For more information, <https://summersmfg.com/application-products/strip-till> or contact your local Summers Manufacturing Strip Till dealer.

About Summers Manufacturing

Summers Manufacturing is an innovative leader in the agricultural equipment industry, dedicated to supporting farmers in their mission to feed and fuel the world. Since its inception in 1965, Summers has demonstrated a commitment to advancing agricultural practices through the introduction of new and efficient equipment. With a focus on understanding the evolving needs of farmers and the agricultural industry as a whole, Summers consistently invests in research and development to design and manufacture equipment that addresses key challenges faced by farmers worldwide.
